

TalentFlow – Recruitment & Resume Management System

Laravel Hiring Project (5 Days)

Project: TalentFlow – Recruitment & Resume Management System

Duration: 5 Working Days (35–45 hours)

Objective: Build a recruitment platform where recruiters can manage jobs, screen candidates, assign technical tasks, schedule interviews, and track the complete hiring pipeline.

Modules

1. Authentication & Roles

Implement Sanctum authentication with role-based authorization.

Roles:

- Admin
- Recruiter
- Candidate

2. Job Management

Recruiters can create and manage job openings.

Fields: Title, Department, Description, Required Skills, Experience, Salary Range, Application Deadline, Status.

3. Resume Management

Candidates apply with a PDF resume. The system should:

- Upload PDF
- Store securely
- Process via Queue
- Extract candidate information
- Generate skill score

4. Candidate Scoring Engine

Build a scoring algorithm based on skills, experience, education, and optional bonus skills.

5. Hiring Pipeline

Track candidates through every hiring stage: Applied → Screening → Shortlisted → Interview → Technical Task → Hired / Rejected.

Every change must create history.

6. Interview Scheduler

Recruiters schedule interviews.

Features: Date & Time, Interviewer, Meeting Link, Conflict Validation, Status.

7. Technical Task Management

Recruiters assign coding tasks.

Task States: Pending, In Progress, Submitted, Reviewed, Overdue.

8. Deadline Automation

Use Scheduler + Queue.

Automations: 24h reminder, Mark overdue, Notify recruiter after submission.

9. Dashboard APIs

Return analytics: Total Jobs, Active Candidates, Interviews This Week, Pipeline Distribution, Average Candidate Score.

Technical Requirements

Laravel Features (Mandatory)

- Sanctum Authentication
- Form Requests & API Resources
- Policies / Gates
- Queues & Scheduler
- Events, Listeners & Notifications
- Service Classes & Feature Tests
- Repository Pattern (Optional)

Database Design

The candidate must design relationships independently for the following entities: `users`, `roles`, `jobs`, `skills`, `job_skills`, `candidates`, `resumes`, `applications`, `application_status_histories`, `interviews`, `technical_tasks`, `task_submissions`, `notifications`.

Required APIs

- **Auth:** Login / Logout / Me
- **Jobs:** CRUD
- **Applications:** Apply / List / Update Status
- **Resume:** Upload & Process
- **Interviews:** Schedule / Update
- **Tasks:** Assign / Submit / Review
- **Dashboard:** Analytics
- *Minimum 25–30 REST endpoints.*

Deliverables

- GitHub Repository
- README with setup instructions
- Postman Collection
- SQL migrations & Seeders
- Feature Tests

- API Documentation

Evaluation Rubric

Category	Weight
Laravel Architecture	20%
Database Design	15%
API Quality	15%
Queues & Scheduler	15%
Authorization	10%
Testing	10%
Code Quality	10%
Documentation	5%

Suggested 5-Day Timeline

Timeline	Milestone Focus
Day 1	Auth, Roles, Database Schema, Job CRUD
Day 2	Resume Upload, Queue Processing, Scoring Engine
Day 3	Hiring Pipeline Logic, Interview Scheduling
Day 4	Technical Tasks, Deadline Automation & Notifications

Timeline	Milestone Focus
Day 5	Dashboard APIs, Feature Tests, Documentation, Refactoring
